

COMPREHENSIVE LIST OF QUOTES ON BACTERIA

FROM 4 TALKS OF HER HOLINESS SHRI MATAJI NIRMALA DEVI

Sahaja Yoga ▪ Compilations ▪ sahajayoga.compilations@gmail.com

“Such a beautiful city, such a beautiful country. God has given you everything so beautiful. **I don't know how human beings are making a mess out of everything, like bacteria, they'll spoil everything, it's like fermented grape juice.**”

1981-1103 Talk to Sahaja Yogis, You must grow fast in Sahaja Yoga, Bramham Court Ashram, London, UK

“Some observations made by Shri Mataji: There is never fever in Epilepsy. Similarly in cancer, no fever. Those who are mad don't get heart attacks. Viruses are derived from vegetable kingdom e.g., tobacco is also similar. **Similarly, bacteria are plant cells. Due to aggressive behavior they are removed from circulation. Unicellular organism paramecium is aggressive. So these are removed from circulation and become bacteria.**”

1986-1104 Conversation with doctors, New Delhi, India

“Fever is caused to those whose liver is out, who has overworked his liver. He is heated up etc. It can be corrected by putting ice on the liver. Malarial fevers are right sided i.e. mosquito bites. **Bacterial fevers are left sided. These are mainly due to certain in-takes of food such as fungus like mushrooms, old paneer etc.**”

1987-0226 and 27 Conversation with Sahaja Yogis, Shivaratri, Mumbai, India (translation from Hindi)

“So many things have died in the evolutionary process, have gone out of the process of evolution. **Like there might be some plants which we call as bacteria and all these viruses also, the same. So, once they enter into your conscious mind or conscious side, you get affected. So for cancer, doctors call it protein 53, 58,**

..., they have given names like that. So in Sahaja Yoga your attention is pulled out from the left side brought into the center. As a result of that you become all right. Also, the highest type of left side affectation is lunacy. Also can be cured."

1995-0802 Medical Conference, Ecological University, Bucharest, Romania
